

Haizea - Feature #3

Document pluggable mappers

08/07/2009 05:49 AM - PhoenixForge Admin

Status:	New	Start date:	08/07/2009

Target version:	Wishlist	Spent time:	0.00 hour
Description			
In Haizea, the resource mapper is designed to be pluggable (currently only one mapper, the "greedy" mapper, is included with Haizea). This feature is already implemented, but not documented. However, to provide effective documentation on this feature, some of the internal scheduling data structures (specially the SlotTable and the AvailabilityWindow) have to be documented better.

- Target version changed from 1.0 to Wishlist

Writing a custom mapper is such a specific task that writing documentation for it is not really worth the effort right now, specially now that SlotTable and AvailabilityWindow are documented. This goes in the wishlist, although we can revisit it if it turns out more people want to write their own mappers.
